Providing Innovative Disinfectants, Cleaners & Hygiene Solutions Across Global Sectors

Helping your business re-open!

We help you to create a safer, cleaner and healthy environment throughout your facility; whether it's a classroom, restaurant, public washrooms, kitchen, reception, guest rooms, offices, meeting room, retail shops or public transport. Our solutions and applications are designed to elevate the high-quality of service, safety and take care of users. Our world class solutions integrate products, processes, training and measurement systems to reduce risk, improve results and lower overall cost.

Personal safety measures

Algard

Clean hands

Individuals should practice hand hygiene at key points in time to disrupt the transmission of disease to others. This includes immediately upon arrival at work, after touching contaminated surfaces, and after contact with other individuals.

- Wash with soap and water. There is no substitute for hand washing.
- Sanitize with an alcohol hand rub if hand washing is not available. Alcohol can kill the germs on hands, but it cannot clean them. If your hands are soiled, you must perform a full hand wash.
- Cover your nose and mouth with a tissue when you cough or sneeze. Perform hand hygiene after disposing of the used tissue.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with infected individuals, and use a personal protective mask if needed.
- Dispose of masks after use, do not share masks and perform hand hygiene.
- Discard disposable PPE after use and perform hand hygiene.

Environmental hygiene recommendations for enhanced cleaning/disinfection:

- Implement a standardized disinfection protocol for frequently touched surfaces and use disinfectants that are well certified and with the right efficacy claims, and are safe for people and surfaces.
- Clean rooms unaffected by SARS-CoV-2 (Coronavirus) before moving to contaminated areas.
- Focus cleaning and disinfection on high-touch surfaces, such as door handles, handrails, toilet flush and sink handles, etc.
- Remove PPE only in cleaned areas and do not distribute them elsewhere. Disposable PPE should be discarded after use.
- After use, cleaning cloths (if not disposable) should be placed with soiled linen for disinfection in the special SARS-CoV-2 approved hygienic laundry process.

www.algardcare.com/protect

Generic principles of cleaning:

- Clean from high to low.
- Start from the furthest point of the room and work backwards to the door.
- Clean from dry to wet.
- Maintain a constant flow such as working in a clockwise direction around the room so no areas are missed.

Cleaning best practices:

If there are still potential risks after re-opening, increase the cleaning frequency. Gloves and aprons with sleeves should be worn. Masks and face protection are only needed if splashing is anticipated. The level of cleaning should be based upon the extent of any outbreak:

- Be mindful to disinfect all high-touch surfaces in guest rooms, bathrooms and also in public areas.
- If possible, make disinfectant wipes and alcohol hand rub available at points of entry to the lobby and in public areas for anyone to use. In healthcare facilities, masks may be provided to patients, but in other types of facilities they are not needed. Some facilities may choose to have them available, but this is not currently part of the public health recommendations for non-healthcare facilities.
- Clean and disinfect public areas frequently as well as cleaning tools and machines from several times per day to hourly depending on facility traffic.

Clean and disinfect high touch surfaces:

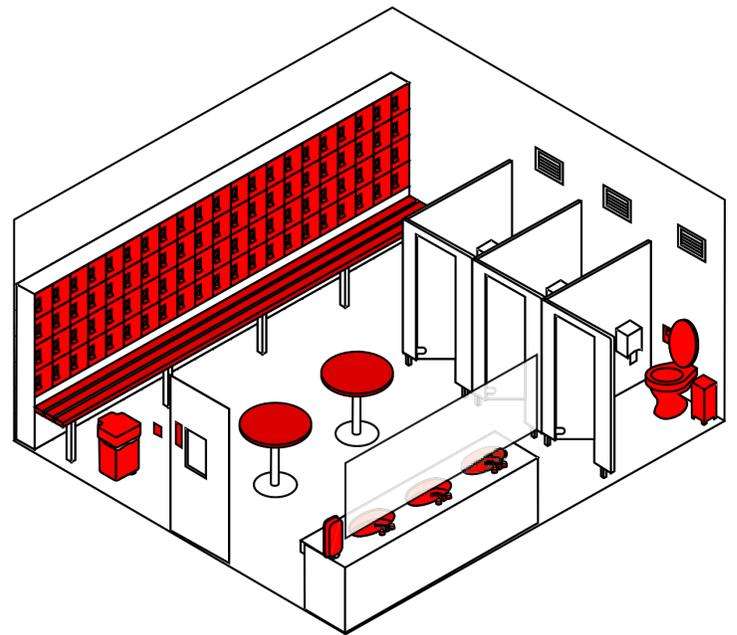

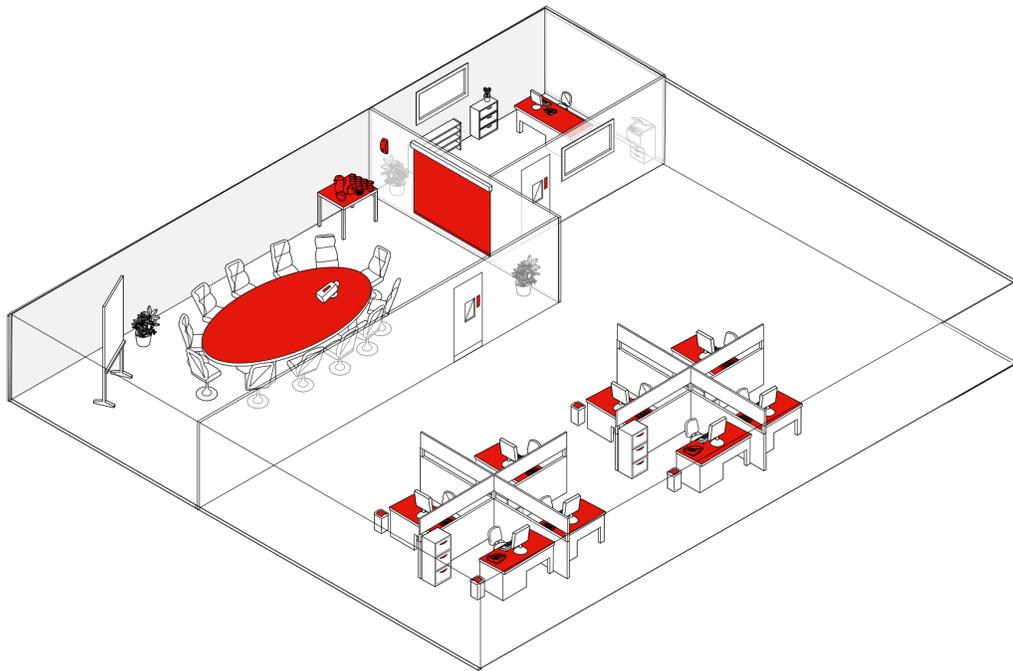

Commonly touched surfaces (door handles, light switches, elevator buttons, taps, hand rails, reception desks, bar desks, canteen/lunch room tables, stair corners, public area furniture, gym/fitness equipment etc.) should be disinfected regularly or when visibly soiled using a disinfectant that is effective against coronavirus.

Restaurants, cafe's, bars canteens, kitchens, etc
